## **PMeV focussing on mission- and safety-critical broadband applications**

PMeV – Netzwerk Sichere Kommunikation (German Association and Network for Critical Communications) has established a platform for mission- and safety-critical broadband applications which deals inter alia with the standardization of a control center interface. Well-known companies from the sector of critical communications as well as important customers from public authorities and organizations with security tasks are represented in this committee. "Through the introduction of new technologies, the technical requirements imposed on professional control systems will considerably change in the future. In this conjunction, the control center interface will be of particular importance for the introduction of a mission-critical broadband network (4G/5G) for security agencies in Germany", explained Volker Hartwein, PMeV Vice-President and head of the Control Centers department.

Mission- and safety-critical broadband applications are gaining increasing significance in the market for professional mobile radio and critical communications. With the establishment of this platform, the PMeV Association demonstrates its decision to actively contribute to this development: "We want to act as the main contact and competence center for all relevant topics relating to mission- and safety-critical communications", said PMeV President Bernhard Klinger.

For the PMeV, the expansion of its range of topics is of particular importance. Addressing mission- and safety-critical broadband applications fits well into the PMeV undertaking to position itself as center of competence for all important areas of secure communications. "The PMeV Association deals with new and important developments in topic-oriented departments. This leads to profitable platforms for our members and provides maximum flexibility when dealing with new topics", explained Bernhard Klinger.

### **About PMeV – NETZWERK SICHERE KOMMUNIKATION**

*The PMeV is a German Association of leading suppliers and users of communication systems for mobile professional applications. Its members include manufacturers, system providers and application houses as well as network operators and users. The aim of PMeV is to further expand and develop the PMR market in Germany. The Association demonstrates the importance of PMR solutions for business and national economies and influences the political and regulatory parameters and framework for the use of professional mobile radio solutions. In its role as leading center of competence for PMR in Germany, PMeV offers a forum for a neutral, manufacturer-independent and collaborative dialog with market partners, politicians as well as public authorities and institutions. In addition, PMeV offers manufacturers, users and consumers a neutral dialog platform for the assessment of technologies and the discussion of chances and risks of technical solutions and concepts. The PMeV Association promotes standards and is actively involved in their further development in line with the requirements of the German market.*
